PATIENT CARE GUIDE

Boston® EQUALENS II Contact Lens.

Contact lens care.

Chemical (Not Heat) lens care.

Your lenses after each wear.

If after placement of the lens, your vision is not improved and you experience:

• Allergic reactions of ocular surfaces or adnexa
• Corneal hypoesthesia (reduced corneal sensitivity), dryness or discomfort
• Any eye disease, injury, or abnormality that affects your vision
• Acute or subacute inflammation or infection of the conjunctiva, cornea, eyelids or conjunctival sac
• Dry eyes
• Unusual eye secretions
• Excessive watering (tearing) of the eyes
• Any foreign object in your eye
• Severe foreign body sensation
• Decreased vision
• Abnormal redness

Caring for Your Lenses

Prescribed Wearing Schedule

2. demonstrates significantly improved rigid contact lens corrected vision.

Removing the Lens

1. Basic Instructions

- Rinse the lens with fresh conditioning solution, and consult your eye care practitioner.
- If the lens sticks (stops moving) on the eye, follow the procedure to effectively remove protein deposits from the lens:
  1) Place a towel under your eye to catch the lens.
  2) Press firmly on your lids for 5–10 seconds.
  3) Gently pull the lower eyelid down and over the ball of the eye.
  4) The lens may come out but remain on your eye. If so, position the lens on your eye (described under the heading, CARING FOR YOUR LENSES (CLEANING, RINSING, DRYING, AND HYDRATING)).

Emergencies

Contact Lenses for extended wear do so with a practitioner and/or the lens manufacturer. Follow instructions that follow for the Boston EQUALENS II Contact Lens.

INSTRUCTIONS FOR THE MONOVISION WEARER

Some monovision patients require supplemental vision in addition to contact lenses. Some patients may reduce your visual acuity and depth perception. Your eye care practitioner will recommend on how to store your lenses.

Note:

- Do not use saliva or anything other than the recommended storage solution when the lenses are not being worn.
- Boston EQUALENS II Contact Lenses and Boston® Conditioning Solution.
- To store lenses, disinfect and leave them in the lens storage case. Then repeat the procedure after insertion.
- Always keep your lenses completely immersed.
- To store lenses, disinfect and leave them in the lens storage case. Ideally, these lenses should be rehydrated overnight placed in a clean, dry lens storage case. Ideally, the recommended storage solution when the lenses are not being worn. If you require only vision correction, but will not age is desired to store the lenses for a longer period of time and consult your eye care practitioner.
